Total		650	650	331 (50.92%) Bed Occupancy							

Comments:

1. Bed Occupancy was 50.92% of which a majority of patients in all the wards were not genuine, had minor complaints such as cough, back ache, abdominal pain, joint pain, etc, and did not merit admission.
2. There was a mismatch in the date of admission of patients and the entries in the ward register.
3. In a female surgical ward 11 patients shown in the register to be admitted on 23/02/2016 were not found in the ward.
4. In some of the wards there were no entries in the ward register of patients admitted 3 to 4 days prior suggesting patients were admitted on the day of admission with intentional manipulation of the date of admission.
5. Ophthalmology, ENT and Surgical patients were in a single ward as can be seen from the table above.
